

Real Time Session Logging and event playback For key strokes, Mouse Movement and Screen Updates For Microsoft Platforms

Enterprise AdminGuard™ (EAG) facilitates the capture and review of system administration activities. This unique product empowers organizations to audit and safeguard multiple Microsoft Windows servers from potential misuse of administrators. In addition, this peerless product assists in the recovery of operational errors through the availability of a complete set of audit trails.

Intentional or accidental errors such as the deletion of files, modification of databases, and reformatting of hard disks, result in business disruptions and loss of customer confidence. EAG establishes accountability among system administrators, operators and database administrators, by recording every mouse click and key-stroke, and furnishing exhaustive session based audit trails. EAG acts as a virtual video recorder to allow all activities performed by key administrators to be recorded and reviewed by an independent third party.

EAG has three components - Host Recorder, Audit Server and Log Reviewer.

Host Recorder

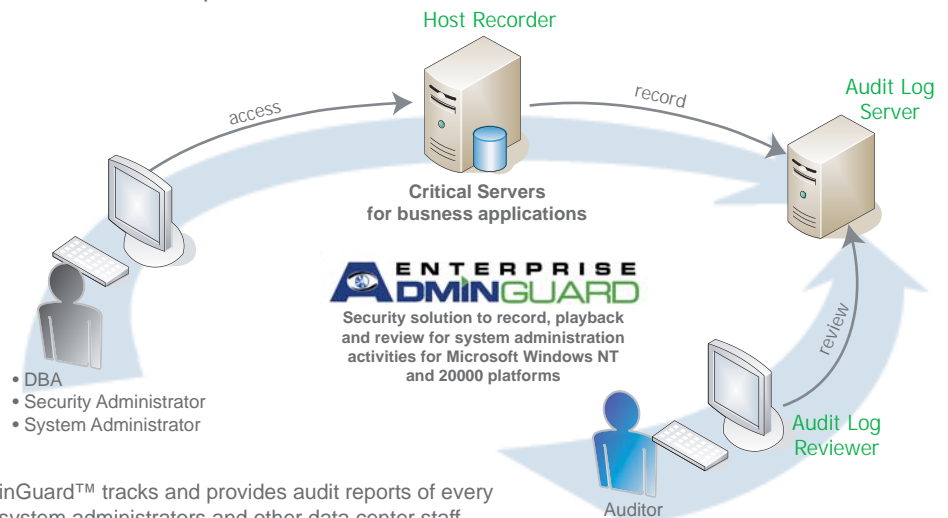

This records all keystrokes, mouse actions and screen updates for each login session. It tracks incremental updates to minimize the size of the log files and serializes the log files to guarantee integrity.

Audit Server

The audit server runs on a dedicated machine and minimizes configuration management effort by automatically filing log files. It delivers retention management for the audit log files.

Log Reviewer and Audit Log Player

This utility enables video playback control of the log files, enables management of multiple audit log servers and administers flexible search capabilities.

i-Sprint's Enterprise AdminGuard™ tracks and provides audit reports of every change performed by system administrators and other data center staff.

Host Recorder

Features	Benefits	Supported Platforms
Session Based Logging	Each login session is recorded in a separate log file for easy search and management	Windows NT 4.0 with SP5 and above Windows 2000 SP3 and above Windows XP SP2 and above Windows 2003 SP1 and above Windows Terminal Services Citrix Metaframe
Key Stroke Recording	All keyboard activities are recorded	
Mouse Action Recording	All mouse activities are recorded	
Screen Update Recording	All screen activities are recorded	
Audit Log Optimization	Only incremental changes to screens are recorded	

Audit Log Server

Features	Benefits	Supported Platforms
Redundancy Server	Clustering capability to provide high availability features. Retention Policy manage log records by either retention days or storage size	Windows NT 4.0 with SP5 and above Windows 2000 SP3 and above Windows 2003 SP1 and above
Automated Filing	File audit log automatically based on server file and no configuration setting is required	

Audit Log Reviewer

Features	Benefits	Supported Platforms
Tree Structure View	Management of multiple audit log servers	Windows NT 4.0 with SP5 and above Windows 2000 SP3 and above Windows XP SP2 and above Windows 2003 SP1 and above
Reviewer Tracking	Provide audit trail of audit log review activities	
Programme Listing	Allow reviewers to examine the list of programmes and commands executed during each session	
Log File Search	Unique search capabilities	
Interface to Audit Log Player	Automatic launch of audit log player
