AccessMatrix™ Digital Form
## With Digital Signing & Workflow

Secure Electronic Form with Digital Signing and Comprehensive Document Management

The transition from paper-based processes to digital workflows is imperative for organizations striving for efficiency and competitiveness. The adoption of electronic form, electronic signatures, and electronic document management systems plays a vital role in this digital transformation.

These technologies help accelerate business processes, reduce mistakes, improve transparency, and enhance security, helping the organization become fully digital.

AccessMatrix Digital Form is a secure electronic form and comprehensive document management solution with easy-to-use online form builder that allows you to create online forms, define workflows, manage approvals, digitally sign, track requests and check document authenticity.
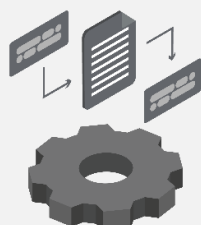

Key Features

Integrated Form Designer
Integrated Form Designer enables users to create and customize complex online forms with built-in workflows, accessible through web browsers on PCs, tablets, and mobile phones.

Integrated Digital Signatures & Printed Document Validation
Supports the use of digital signatures on form and pdf document, ensuring the authenticity and legal validity of electronic documents. Additionally, it enables instant validation of printed documents via QR code, allowing users to quickly detect any modifications or counterfeit documents
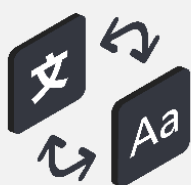

Flexible Workflows Approval
Support multiple workflows and user role assignments for streamlined processes.

Document Management & Archival
Documents are securely encrypted during storage to prevent unauthorized access.
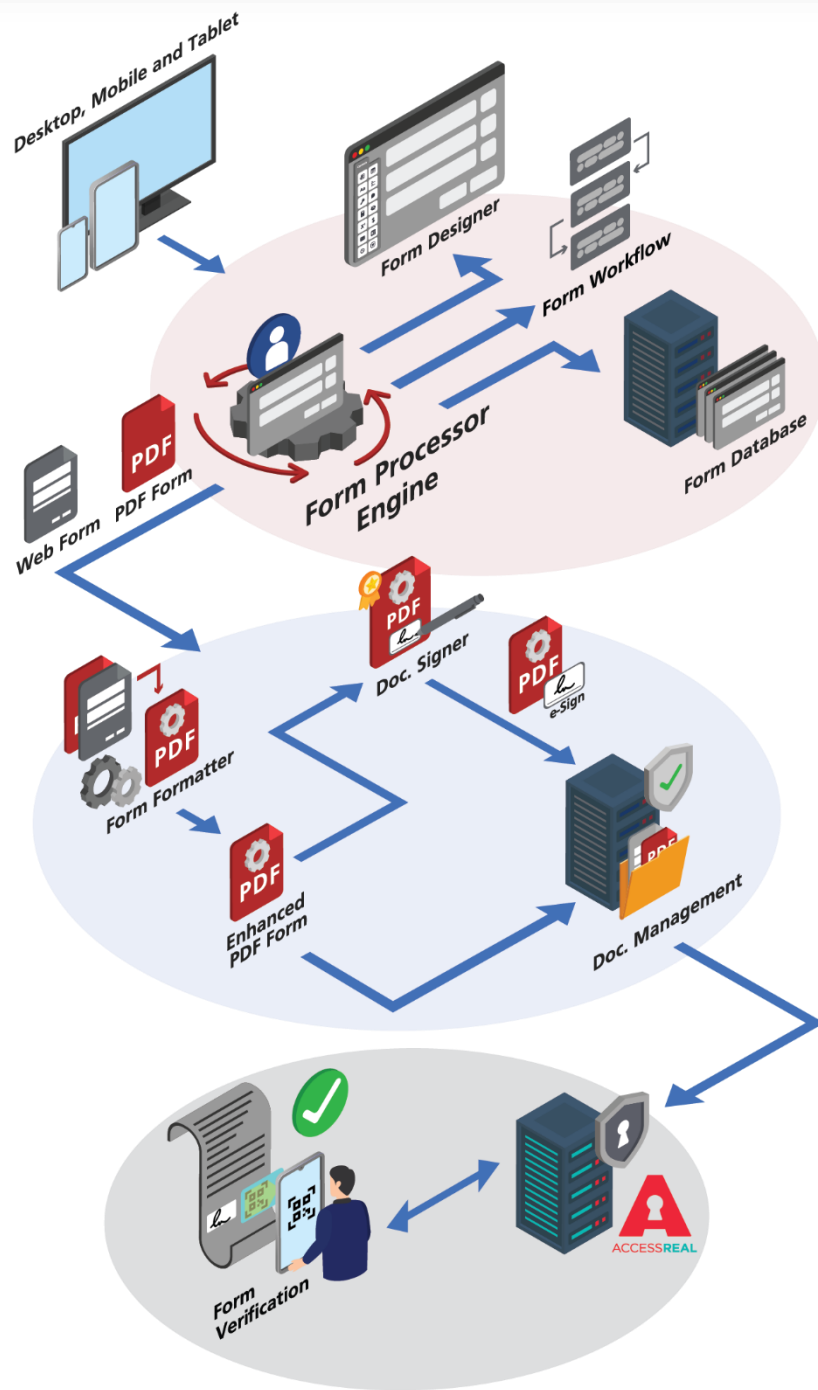

Multi-Language Form Friendly
Support multiple languages for forms and PDF output files.

Advanced Encryption
Compliant with PDPA, GDPR, and top industry security standards.

Digital Form Management System

1 Form Management Module

Leveraging adaptive web technology, this lets users fill out forms and digital signing directly via a web browser.

The web-based designer simplifies form creation, with automated routing and signing workflows.

All form data encryption ensures compliance with industry-standard security protocols.

2 Document Management Module

Data collected from forms can be imported into pre-designed templates for professional output..

Document Signer enables secure e-signatures (PKI-based) or digital signatures with CA-certified certificates.

Documents are securely encrypted during storage to prevent unauthorized access.

3 Printed Document Validation Module

Supports authenticity of printed documents checked by incorporating a tamper-proof security label with a unique serial number and clone-proof code directly onto the physical document. This allows for instant validation via QR code scanning, enabling users to quickly identify any alterations or counterfeit copies.
